

# Don't Leave Kids In **HOT CARS**

- Opening the window slightly does not keep the temperature at a safe level.
- Rising temperatures inside a car can cause a child to suffer from heat stress, dehydration and even shock.
- The temperature inside a parked car can exceed 122° within 15 minutes on a typical sunny summer day.

**The inside of a car can heat up quickly  
to temperatures that could hurt or kill a child.**
