

# Winter Home Safety

**As the days get colder, stay warm and safe with these tips:**

- Install a Carbon Monoxide detector on each floor of your home, and near sleeping areas
- Place space heaters at least 3 feet away from curtains, furniture and areas where children play
- Supervise children at all times when a space heater is in use
- Burn only seasoned wood in fireplaces and woodstoves - not cardboard, newspaper or trash. These items burn unevenly and may contain toxins

- Use sturdy screens or doors to keep embers inside the fireplace, and to keep kids out
- Be sure that the fireplace flue is open before lighting a fire
